Our ethos

We want the patient to rediscover life without electronics and social media, and to enjoy a new range of activities that may be more beneficial.

The idea is for them not to waste all of their energy in useless entertainment.

Our objectives

Stopping addiction in teenagers, kids and adults.

Teaching people how to use their mobile phones in a better way.

Helping people to not return to their problem.

Founders and volunteers

You can help by
donating money or by
being a volunteer.

It was found in China
(the country with more
cell addiction of the
word)

We work around the
world.

Our 5 years plan

Depending on the level of your addiction we have different programs:

- Little addiction (level 1): Just going to therapy, twice a week going to meetings with other people and making a program about how many hours you can use your phone.
- Addiction (level 2): two times per week going sleeping on a house at the camps without mobile phones, restriction schedule and organising no-cellphones excursions at weekends.
- Extra addiction (level 3): going to the house to sleep four nights per week, get away the cellphone (don't allow), excursions at weekends and therapy.

Benefits of our projects

Improve patients life and its addiction to smartphones.

Helping people around the world to be happier.
